

Phase 2 EER | CS 6400 - Spring 2023 | Team 021

EER Changes - Phase 2

- Renamed "Order Entered" attributes as suggested by grader
- Transitioned AC/HeatPump/Heater to overlapping mandatory subclasses of AirHandler.
- Replaced separate On/Off Grid Household entities with a single Household entity, and an on_grid attribute
- Note: we did not map the AirHandler entity, as it conveyed no additional information in the DB beyond the "type" attribute on Appliance + the three subclass entities.
- Note: we kept the "type" attribute on Appliance, because it is listed very explicitly in the spec as a property of Appliance: "Additional properties for appliances include...Appliance Type".
